PROFESSIONAL SUMMARY

AI Automation Specialist with a Computer Science background (BS, University of Gujrat), focused on building AI agent and workflow automations using n8n, Make, Zapier, GoHighLevel, and Kommo, backed by hands-on Python/FastAPI and full-stack development experience. Built a production-style Retrieval-Augmented Generation (RAG) pipeline for grounded, context-aware question answering, and an AI-integrated marketplace platform. Seeking an AI Automation role applying practical experience in workflow automation, LLM integration, and backend engineering.

EXPERIENCE

Backend Developer and AI Automation Specialist — Lalaland.pk

Full-time · Jun 2026 – Aug 2026 · Lahore, Punjab, Pakistan · On-site

- Architected and developed scalable RESTful APIs using NestJS, Node.js, and Express.js for high-traffic environments
- Built AI agent systems integrating OpenAI and Anthropic LLMs, enhancing business process efficiency
- Developed WhatsApp Business API integrations, including automated replies and chatbots, streamlining client communication

Business Development Intern — Qodeon Lab

Internship · Nov 2025 – Apr 2026 · Gujrat · On-site

- Engaged in lead generation and client communication to identify business opportunities
- Conducted requirement gathering and proposal writing to tailor technology solutions for clients
- Built and maintained strong relationships with clients to ensure ongoing satisfaction and engagement

TECHNICAL SKILLS

- Automation Platforms: n8n, Make (Integromat), Zapier, GoHighLevel, Kommo CRM, Slack, Google Sheets
- AI / Machine Learning: Retrieval-Augmented Generation (RAG), LLM Integration, Vector Databases, Semantic Search, Sentence Embedding, Hugging Face Transformers, sentence-transformers, TensorFlow.js, NLP Fundamentals, Prompt Design
- Backend & APIs: FastAPI, Node.js, Express.js, REST API Design, Pydantic, Authentication & Authorization
- Programming Languages: Python, JavaScript, SQL
- Data & Databases: MongoDB, ChromaDB, Database Schema Design, Data Chunking & Retrieval
- Tools & Practices: Git, Version Control, Agile/Team Collaboration, Technical Documentation

PROJECTS

AI Lead Qualification & CRM Auto-Sync — n8n Workflow

An n8n workflow that scores inbound leads with an LLM, drafts a personalized reply, and routes each lead into Kommo or GoHighLevel automatically, removing manual triage.

- AI node scores every lead hot / warm / cold and drafts a first-touch reply in the same call
- Hot leads sync to Kommo CRM and ping sales in Slack; warm/cold leads go into a GoHighLevel nurture pipeline with an automated reply
- Every lead is logged to a tracking sheet — full workflow JSON and design notes included

AI Content Repurposing & Multi-Channel Publisher — n8n Workflow

An n8n workflow that turns newly published content into platform-ready LinkedIn, Twitter/X, and Instagram copy, then routes the drafts to Slack for human approval before anything ships.

- Google Sheet content tracker as the single source of truth — no code changes needed to add new content
- One AI call generates a LinkedIn post, a Twitter thread, and an Instagram caption in a single structured response
- Human-in-the-loop approval via Slack, and idempotent processing so nothing gets repurposed twice

RAG Knowledge Base API — Retrieval-Augmented Generation System

Built and deployed a full end-to-end RAG pipeline exposed through a FastAPI backend, combining semantic search with local LLM generation to answer questions grounded in a custom knowledge base.

- Implemented document chunking with overlap, embedding generation using sentence-transformers, and persistent vector storage with ChromaDB using cosine similarity search
- Designed a retrieval-then-generate flow that grounds LLM answers in retrieved context to reduce hallucination, running fully locally with an open-source LLM

EDUCATION

Bachelor of Science in Computer Science — University of Gujrat, Pakistan

CGPA: 3.06 / 4.0
